I am writing to apply for the KFZ-Mechatroniker:in / Mechaniker:in position at LRP Autorecycling GmbH. Your company's focus on sustainable vehicle recycling and future-oriented technologies aligns with my hands-on experience in hardware systems and autonomous vehicle technologies.

Through my research and development work in autonomous systems, I have gained practical experience working with embedded hardware platforms including Raspberry Pi, ESP32, and NVIDIA Jetson Nano. This work involved assembling, testing, and troubleshooting hardware components, as well as integrating sensors and communication modules into functional systems. I am comfortable with systematic disassembly, component handling, and following technical specifications.

One area that particularly interests me is the intersection of vehicle technology and sustainable practices. In my project work on autonomous vehicle security and UAV systems, I developed a methodical approach to hardware testing, component verification, and system-level debugging. These experiences have given me strong attention to detail and the ability to work precisely according to quality standards.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my technical aptitude, hands-on experience with hardware systems, and structured approach to work would make me a valuable addition to your team. I have attached my CV for your review and look forward to the opportunity to discuss how I can contribute to LRP Autorecycling's continued success.

Sincerely,

Md Shahanur Islam Shagor
