I am writing to apply for the Senior Software Engineer position at Flix. The mission of your Revenue Management Products team to build a cohesive ecosystem for pricing tools and services is exactly the kind of challenge I enjoy solving.

My background is in full-stack software engineering with a strong focus on Node.js, TypeScript, React, and distributed system design. I have professional experience building and evolving products that handle real-time data, user authentication, and complex business logic. I am comfortable working with Express and React, and I apply TypeScript rigorously to ensure type safety and maintainability in production systems.

In previous work, I developed RESTful APIs, integrated third-party services, and deployed applications on AWS using Docker and CI/CD pipelines. I have worked with MySQL and PostgreSQL for structured data, and I understand the importance of clean architecture patterns like Domain-Driven Design and SOLID principles when building services that need to scale and evolve over time.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my experience can contribute to the continued evolution of Flix’s Revenue Management Products.

Sincerely,

Md Shahanur Islam Shagor
