I am writing to apply for the Senior Backend Engineer - Cards position at SumUp. Your mission to build simple, affordable financial tools for small businesses, combined with the technical depth of the Cards squad's high-throughput, distributed systems, makes this role particularly compelling to me.

My backend engineering experience centers on building production-ready services with Node.js, Express, and Laravel, and I have a solid understanding of distributed systems, API design, and relational databases like MySQL and PostgreSQL. I have worked with containerization (Docker), orchestration (Kubernetes), and CI/CD practices to deliver reliable, scalable services. I also have experience with Go, which aligns with the languages your team uses.

In my professional experience, I have owned the end-to-end delivery of backend services, from architectural discussions and code reviews to production support and incident response. I have built RESTful APIs, implemented authentication and role-based access control, and optimized database queries for performance. I am comfortable taking ambiguous product problems, defining the technical approach, and leading implementation with minimal guidance.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my backend engineering skills can contribute to the Cards squad at SumUp.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
