I am writing to apply for the Senior Backend Engineer - Activation and Revenue role at SumUp. Your mission to build a greenfield activation platform that converts millions of merchants into active banking users is exactly the kind of high-impact, growth-focused engineering challenge I want to be part of.

With professional experience in backend development using Go, Node.js, and Laravel, I have built and maintained RESTful APIs, designed database schemas in PostgreSQL and MySQL, and worked with Redis for caching and performance optimization. I am comfortable with system architecture, data modeling, and event-driven design principles. The opportunity to architect services like Banners, Rewards, and Feature Toggles from the ground up aligns directly with my technical background.

In previous work, I owned the full lifecycle of features from architectural design to production monitoring. I have deployed applications on Linux servers using Docker and Nginx, set up CI/CD pipelines, and implemented real-time communication using Socket.IO. I value clean, maintainable code and regularly refactor to keep systems simple and scalable. I am used to working in environments that move fast, test hypotheses, and iterate based on real-world data.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to the Bank Activation and Revenue team at SumUp.

Sincerely,

Md Shahanur Islam Shagor
