I am writing to apply for the Vice President of Growth role at Coduct Solutions GmbH. Your focus on cloud-first, AI-driven solutions and scalable service offerings aligns with my background in full-stack software engineering and my understanding of how technical capabilities translate into market-ready products.

Through my professional experience as a Web Developer, I have built and deployed scalable applications using Laravel, Next.js, and Node.js on cloud infrastructure including AWS and Docker. I have worked on projects that required structuring repeatable service packages, integrating third-party APIs, and ensuring smooth delivery from development to production. This has given me a clear view of how product, technology, and delivery must align to create offerings that can scale.

One area that particularly interests me is the productization of services. In my previous work, I have been involved in defining service boundaries, optimizing deployment workflows, and collaborating across teams to turn technical solutions into structured, repeatable offerings. I am comfortable working with KPIs, pipeline metrics, and conversion data to guide decisions and improve outcomes.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how my engineering background and growth-oriented mindset can contribute to Coduct’s next phase of expansion.

Sincerely,

Md Shahanur Islam Shagor
