I am writing to apply for the Head of Engineering position at ANGEHEUERT GmbH Personalberatung. The opportunity to lead engineering teams through technological transformation, particularly in the security and compliance domain, aligns with my technical background and career direction.

Through my professional experience as a Web Developer, I have built and deployed full-stack applications using Laravel, Next.js, and Node.js, with a strong focus on system architecture, API design, and database optimization. I have worked with CI/CD pipelines, Docker, and Linux server environments, ensuring stable releases and reliable production deployments. My work has involved implementing secure authentication, role-based access control, and real-time features using WebSockets and Socket.IO.

One area that particularly interests me is the transformation of legacy systems to modern SaaS platforms. I have experience migrating applications to cloud infrastructure on AWS and Google Cloud, containerizing services with Docker, and setting up monitoring with Prometheus and Grafana. I have also integrated AI capabilities into production applications, including training AI assistants with OpenAI and building computer vision systems using YOLOv8 on edge devices like the NVIDIA Jetson Nano.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to your client’s engineering organization.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
