I am writing to apply for the SAP Logistik Anwendungssupport position at passport Business Engineering GmbH. Your company's focus on delivering tailored IT solutions for the food and beverage industry, including ERP systems, data management, and process control, is an area where I believe my technical background can contribute effectively.

Through my professional experience in web development and IT support, I have developed strong skills in system maintenance, database management, and troubleshooting. I have worked extensively with MySQL and PostgreSQL, and I am comfortable managing Linux servers, configuring Nginx and Apache, and using Docker for deployment. These skills are directly relevant to supporting hosted logistics systems within an SAP environment.

One area that particularly interests me is the upcoming S/4 HANA migration and interface management mentioned in the role. My experience integrating third-party services, building RESTful APIs, and managing data flows between systems has given me practical knowledge of how different software components interact. I am confident I can contribute to migration projects and support the team during system transitions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills align with the needs of your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
