I am writing to apply for the Senior QA Manager - Mobile Games position at SOFTGAMES. Your focus on delivering high-quality casual games across iOS and Android, combined with a remote-first culture, aligns well with how I approach building and maintaining reliable systems.

While my professional background is in full-stack development, I have consistently focused on quality, monitoring, and reliability throughout my projects. One area that particularly interests me is the emphasis on QA automation, crash monitoring, and release readiness. In my work on a real-time server health monitoring dashboard, I built a system using React, Node.js, Socket.IO, and Docker that tracked live metrics, investigated latency issues, and pushed real-time status updates to users. This required the same analytical approach to identifying problems, documenting issues clearly, and ensuring system stability that this role demands.

Through my experience developing a multi-vendor e-commerce ecosystem with Laravel and Flutter, I gained practical knowledge of testing complex user flows across platforms, including authentication, payment processing, and real-time notifications. I worked closely with developers and stakeholders to maintain release quality, wrote detailed documentation, and followed structured deployment workflows. These experiences have given me a strong foundation in understanding how quality impacts the end-user experience in live applications.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and am prepared to complete the assignment as part of the application process. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
