I am writing to apply for the Estˆ¡gio de Prevenˆ§ˆ£o a Fraudes position at Mˆ'liuz. Your company's focus on creating secure products and services aligns with my experience in building systems that prioritize data integrity, authentication, and fraud prevention.

Through my professional experience as a Web Developer, I have designed and developed full-stack applications that incorporate robust security measures. I have implemented role-based access control, KYC verification, two-factor authentication, and secure payment gateway integrations in production environments. These features are directly relevant to fraud prevention, as they help verify user identities, control access, and monitor transactions for suspicious activity.

One project that demonstrates this capability is the Free Games Hub platform, where I built a complete user management system with KYC verification, a points economy, deposit and withdrawal flows, and real-time notifications. The system required careful handling of user data, secure financial transactions, and automated monitoring to prevent abuse. I also developed a Real-Time Server Health Monitoring dashboard that tracks system metrics and availability, which can be adapted to monitor fraud-related patterns and anomalies.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to Mˆ'liuz's fraud prevention efforts.

Sincerely,

Md Shahanur Islam Shagor
