I am writing to apply for the Functional Assessor position at PFAS (Personal Functional Assessment Services). My background in software engineering, combined with my experience building scalable systems and working with diverse technologies, makes me a strong candidate for this role.

Through my professional experience as a Web Developer, I have designed and developed scalable web applications using Laravel and Next.js. I have built and integrated RESTful APIs for seamless data exchange, implemented authentication and role-based access control, and optimized application performance through query tuning and caching strategies. These skills have prepared me to handle complex technical challenges in a structured and efficient manner.

A relevant example is my work on a multi-vendor e-commerce platform where I developed a full-stack marketplace management system connecting customers, sellers, and logistics teams. This project required careful architecture planning, role-based access control, and integration of multiple services, demonstrating my ability to manage complex systems with attention to detail and reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills and experience align with the needs of PFAS. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
