I am writing to apply for the Technical Product Manager position at Worth AI. Your mission to redefine how businesses make onboarding and risk decisions using intelligent, scalable technology is compelling. I am drawn to the challenge of building products that sit at the intersection of data, engineering, and customer impact.

My experience as a full-stack engineer has given me a strong technical foundation for this role. Over the past four years, I have designed and delivered SaaS platforms, built and integrated RESTful APIs, and worked on data-rich applications. I understand the engineering lifecycle deeply, which allows me to translate product vision into clear, implementation-ready technical requirements and user stories.

One area where I can contribute immediately is in managing the product development lifecycle end-to-end. In my professional experience, I have owned features from concept to delivery, working alongside developers to groom stories, prioritize backlogs based on impact and customer value, and align testing strategies with product goals. I have also maintained product documentation, including feature overviews, workflows, and release notes, ensuring internal teams and stakeholders stay aligned.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident I can help Worth AI scale its platform and deliver intuitive, impactful products. I have attached my CV for your review and welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
