I am writing to apply for the Business Intelligence Analyst position supporting the Digital Regulatory Assurance System (DRAS) project with the Government of Alberta. The initiative to modernize and digitize environmental regulatory processes through a single digital platform is a meaningful undertaking, and I am interested in contributing to its analytical and reporting capabilities.

My technical foundation includes working with SQL databases such as MySQL and PostgreSQL for querying, data transformation, and reporting. I have experience analyzing structured datasets and building systems that support operational decision-making. While my primary background is in software engineering, I have worked extensively with data-driven applications where translating business needs into technical solutions was a core part of my daily work.

Through my professional experience as a Web Developer, I collaborated directly with stakeholders to understand reporting requirements and KPIs, then designed and implemented scalable solutions. I have experience ensuring data quality, consistency, and security compliance in production environments. I am also familiar with AI-assisted tools and have integrated AI capabilities into applications to automate workflows and generate insights.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my analytical and technical skills can support the DRAS program.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
