I am writing to apply for the AI Systems Engineer (Offensive Cyber) position. My work sits at the intersection of AI engineering, cybersecurity, and autonomous systems, which aligns well with the technical focus of this role.

Through research and development work, I have built secure communication protocols for UAV networks using encryption (AES, secure key exchange) and designed decentralized frameworks that protect against spoofing, jamming, and unauthorized control. I have also developed privacy-preserving systems using Zero-Knowledge Proofs and post-quantum cryptography, ensuring data integrity and resilience in adversarial environments.

One area that particularly interests me is building tamper-proof communication layers for autonomous systems. In my project OmniGuard V2X, I integrated blockchain with SHA3-256 chaining to create a decentralized security framework for Vehicle-to-Everything networks. This involved real-time data validation, cryptographic linking, and protection against cyber and post-quantum threats. The system was deployed on NVIDIA Jetson Nano and Raspberry Pi, combining edge computing with secure distributed coordination.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI systems and offensive cyber security can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
