I am writing to apply for the Senior PCB Design Engineer position at Openchip And Software Technologies SL. Your focus on next-generation data center accelerator platforms and high-density board design aligns with my interest in building robust, performance-critical hardware systems.

While my professional background is primarily in software engineering, I have substantial hands-on experience with embedded hardware platforms and system-level integration. I have worked extensively with Raspberry Pi, ESP32, and NVIDIA Jetson Nano, developing real-time systems that require careful consideration of power delivery, signal integrity, and thermal constraints. This includes designing and implementing low-level communication protocols for sensor fusion and data acquisition.

One project that demonstrates my hardware-software co-design capability is the Wireless Vision-Aid for the Blind (WVAB). I built this system using YOLOv8n on a Raspberry Pi with an ESP32-CAM module, implementing a custom UDP streaming protocol for ultra-low latency video transmission. The system required careful management of power consumption, thermal dissipation, and real-time processing constraints while operating fully offline. This experience gave me practical insight into the challenges of integrating multiple hardware components and optimizing for performance under strict physical limitations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my hardware integration experience can contribute to Openchip’s accelerator platform development.

Sincerely,

Md Shahanur Islam Shagor
