I am writing to apply for the Kundenkommunikations-Lead (Werkstudent) position at KarlvonDrais GmbH und Co. KG. The idea of combining customer communication with real automation and AI workflows is exactly the kind of hands-on, experimental role I look for.

Through project development, I have built AI-powered systems that integrate APIs, voice processing, and automation. I developed an AI-powered financial application using OpenAI, AWS Transcribe, and Express, where voice messages are converted to text and processed by AI assistants. I also built an AI real estate platform that uses Replicate API for image processing and Stripe for payments. These projects required working with APIs, refining prompts, and testing workflows until they worked reliably.

What stands out to me about this role is the focus on daily optimization: setting up voice agents, testing API integrations, refining prompts, and running A/B tests. I enjoy identifying bottlenecks and building small automations that make processes smoother. I am comfortable working directly with customers, solving problems on the spot, and iterating based on real feedback.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV and a brief portfolio of my AI and automation work. I would welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
