I am writing to apply for the Director Data & AI Readiness role at KoRo Handels GmbH. What stands out to me about KoRo is how you treat data as the core engine of the business, not just a support function. The idea of connecting D2C and retail signals into one intelligent view of the customer is exactly the kind of infrastructure challenge I find meaningful.

Through my professional experience as a Web Developer, I have built and maintained full-stack applications using Laravel, Next.js, Node.js, and TypeScript. I have designed RESTful APIs, implemented role-based access control, integrated payment gateways, and optimized database performance with MySQL and PostgreSQL. I have also deployed applications on AWS and Linux servers using Docker and CI/CD pipelines, ensuring reliability and scalability.

One area that particularly interests me is building systems that make data accessible and actionable for non-technical teams. In previous work, I have delivered real-time features using WebSockets and Socket.IO, and I have experience setting up monitoring dashboards with Prometheus and Grafana. I understand that AI is only as good as the data underneath it, and I have worked on projects where clean, well-structured data was critical for AI-powered features like assistants and image processing.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV and look forward to the opportunity to discuss how I can contribute to KoRo’s data and AI readiness.

Sincerely,

Md Shahanur Islam Shagor
