I am writing to apply for the Full Stack Engineer - Billings & Subscriptions role at SumUp. Your team's work on the billing engine, merchant wallet, and subscription experiences that power millions of transactions across 37 markets is exactly the kind of high-impact, product-centric engineering I want to be part of. SumUp's mission to empower small businesses with simple and affordable financial tools makes this role particularly compelling.

Through my professional experience as a full-stack developer, I have built and maintained backend services and frontend interfaces for production applications. I work comfortably with Node.js and Go on the backend, and I am experienced with both relational databases such as PostgreSQL and MySQL, and non-relational databases including MongoDB and Redis. On the frontend, I build responsive, typed interfaces using React and Next.js with TypeScript.

A relevant example from my work is the development of a full-stack personal finance platform called Smart Finance. I built the backend API with Node.js and Prisma ORM connected to a PostgreSQL database, and the frontend with Next.js and TypeScript. The platform handles budgeting, transaction management, and real-time updates through Server-Sent Events. This project required careful database schema design, API structuring, and clean state management across multiple modules.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my full-stack engineering experience aligns with the work your Billing and Subscriptions team is doing at SumUp.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
