I am writing to apply for the Senior Software Engineer (Java/SpringBoot) position at Atolls. Your work building a community-driven shopping platform that helps millions of consumers make smarter spending decisions is impressive, and I would welcome the opportunity to contribute to your Shopping team in Munich.

My technical foundation is built on full-stack development with TypeScript, Node.js, React, and AWS. I have designed and deployed microservices-based architectures using Docker and Nginx, worked with both relational databases (MySQL, PostgreSQL) and NoSQL systems (MongoDB), and implemented real-time features using WebSockets and Socket.IO. I also have experience with GraphQL and event-driven communication patterns.

In my professional experience as a Web Developer at Explo-IT, I was responsible for designing scalable web applications, building and integrating RESTful APIs, implementing authentication and role-based access control, and optimizing database performance through query tuning and caching. I also deployed applications on Linux servers with CI/CD pipelines and contributed to knowledge-sharing sessions with the team.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV and cover letter for your review. Thank you for considering my application.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
