I am writing to apply for the Mitarbeiter im Flutter Frontend Dev Team position at YUVENDA. Your focus on building Flutter-based POS applications for Android and Windows, combined with a modular monorepo approach, aligns directly with my experience in cross-platform mobile development and scalable application architecture.

Through hands-on project development, I have built multi-role Flutter applications that integrate REST APIs, role-based access control, and real-time communication via WebSockets. I designed these systems with a modular structure, separating shared core components from vertical app features, which matches the development approach you use at YUVENDA. This experience has given me practical knowledge of Dart, Flutter, and the patterns needed to maintain consistency across different device types including smartphones, tablets, and desktop.

One area that particularly interests me is UI/UX optimization for different screen sizes and platforms. In my previous work, I have implemented responsive layouts and adapted interfaces for varying device specifications, ensuring a consistent user experience. I am also comfortable working with Git and CI/CD pipelines to maintain code quality and streamline deployment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to your team at YUVENDA.

Sincerely,

Md Shahanur Islam Shagor
