I am writing to apply for the Technical Product Manager / Product Owner / Project Manager position at Louco Event Media GmbH. Your mission to transform event discovery through intelligent recommendations and community features is a compelling vision, and I am interested in contributing to a platform that combines product thinking with technical execution.

My background is in full-stack development, where I have spent the last 4 years working across the entire software delivery lifecycle. This technical foundation allows me to translate business requirements into clear, actionable specifications that development teams can execute efficiently. I have experience working with APIs, cloud-based architectures, and database systems, which helps me understand technical trade-offs and communicate them clearly to non-technical stakeholders.

In my professional experience, I have worked closely with founders, designers, and developers to coordinate product delivery. I have managed requirement changes, tracked progress, identified blockers, and ensured that product goals aligned with technical implementation. I am comfortable with Agile methodologies, backlog grooming, sprint planning, and maintaining transparency around project status and risks.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am looking for a role where I can focus on building and coordinating rather than just managing tasks. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Louco’s product development.

Sincerely,

Md Shahanur Islam Shagor
