I am writing to apply for the Werkstudent Digitale Medien & AI position at mtc commerce GmbH. Your approach to using AI not as a tool for isolated images but as a systematic support for developing product ideas, design directions, and creative workflows aligns directly with how I think about applied AI.

Through hands-on project development, I have built AI-powered systems that go beyond simple generation. In my AI Powered Real Estate project, I integrated OpenAI and Replicate APIs to train multiple AI assistants, process images intelligently, and build structured workflows for generating and evaluating concepts. This involved systematic prompting, iterative testing, and continuous refinement of outputs to achieve consistent quality.

One area that particularly interests me is the iterative process of testing, evaluating, and sharpening design directions. In my work on the AI Powered Financial App, I developed AI assistants trained on custom datasets, implemented voice-to-text processing, and built automated workflows that generate PDF documents from structured data. This required a structured approach to prompt engineering, output evaluation, and workflow optimization.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to mtc commerce GmbH’s AI-driven product development.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
