I am writing to apply for the Business Operations Manager position at yasp.ai GmbH. Your work on agentic AI compilers for advanced optimization and code generation is genuinely interesting, and I appreciate the focus on execution and organizational clarity.

While my background is primarily technical, I have consistently operated at the intersection of engineering and business operations. In my roles, I have been responsible for translating leadership decisions into actionable development plans, coordinating across technical and business teams, and ensuring that priorities move forward week over week. This has given me practical experience in the kind of execution-first mindset this role demands.

One area that particularly interests me is the emphasis on reducing friction and surfacing misalignment early. In previous work, I have owned planning cycles, managed cross-functional initiatives, and identified bottlenecks before they slowed progress. I am comfortable receiving guidance from leadership and following through independently.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my execution and coordination skills can support yasp’s growth.

Sincerely,

Md Shahanur Islam Shagor
