I am writing to apply for the CRM IT Projekt Manager position at Sandra Lochmann. The opportunity to work with a leading European CRM/CX software company that values innovation in customer relationship management, marketing automation, and machine learning aligns well with my technical background and project experience.

My professional experience spans full-stack web development and project delivery, where I have led the design and implementation of scalable applications. I have worked extensively with Laravel, Next.js, and modern JavaScript frameworks, building RESTful APIs, integrating third-party services, and managing database architectures. This technical foundation allows me to understand software projects deeply and communicate effectively with development teams.

In my role at Explo-IT, I was responsible for delivering web applications from concept to deployment. This involved gathering requirements, coordinating with stakeholders, managing timelines, and ensuring quality through testing and optimization. I implemented authentication systems, payment gateways, and real-time features while maintaining clean code and documentation. These experiences have given me practical skills in project coordination, risk management, and cross-functional collaboration.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to your team. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
