I am writing to apply for the Data Scientist position at YO HR Consultancy. My work combines software engineering with applied AI, and I am interested in contributing to data-driven solutions in a contractor capacity.

Through research and development work, I have built AI-powered systems that process natural language, handle image data, and deliver real-time insights. For an AI-powered financial application, I developed backend APIs using Express and TypeScript, integrated OpenAI's latest models, and used AWS Transcribe to convert voice inputs into structured data. This required designing efficient data pipelines and ensuring reliable model inference in production.

In another project, I built an AI-based real estate platform that used the Replicate API for image processing and OpenAI for intelligent property analysis. I trained multiple AI assistants using GPT models, implemented role-based authentication, and integrated Stripe for subscription payments. These experiences gave me practical exposure to deploying machine learning features alongside full-stack infrastructure.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with your needs.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
