I am writing to apply for the <<ENTER DISPLAY JOB TITLE>> position at NewCold. With four years of full-stack development experience, I have built and deployed production web applications using Laravel, Next.js, React, and MySQL, and I am confident I can contribute effectively to your team.

In my professional experience as a Web Developer at Explo-IT, I designed and developed scalable web applications using Laravel for backend logic and Next.js for frontend delivery. I built RESTful APIs, implemented role-based access control, integrated secure payment gateways, and optimized database performance through Eloquent query tuning and caching strategies. I also deployed applications on Linux servers using Docker and Nginx, and set up CI/CD pipelines for reliable releases.

One project that reflects my approach is the Multivendor E-commerce Management Ecosystem, a full-stack marketplace platform built with Laravel and MySQL. The system connected customers, sellers, and delivery agents through role-based access, real-time notifications via Firebase, and a Redis-backed caching layer for performance. I handled the API architecture, authentication flows, and database design for this production-grade system.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with the needs of your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
