I am writing to apply for the Patient Scheduler position at Pinnacle Method Consulting. Your mission to help job seekers reach their career peak through accessible opportunities resonates with my own commitment to building systems that improve how people access services and manage their time.

Through my professional experience as a Web Developer, I have built full-stack applications that manage complex user workflows, appointment-style data, and real-time communication features. I developed platforms using Laravel, Next.js, and React that handle user authentication, role-based access, and database-driven scheduling logic. These systems required careful attention to data accuracy, user permissions, and responsive interfaces.

In previous work, I built a multi-vendor e-commerce ecosystem using Laravel and Flutter that coordinated multiple user roles, managed order flows, and integrated real-time notifications. I also developed a real-time server health monitoring dashboard that tracked system availability and streamed live metrics to users. Both projects required structured data handling, clear user interfaces, and reliable backend logic.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background in building structured, user-focused systems can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
