I am writing to apply for the Pharmaceutical & Clinical Research Expert position at CuraSenseAI. While my background is in software engineering and AI systems, I bring strong analytical and research capabilities that are directly applicable to evaluating clinical, biomedical, and pharmaceutical content.

Through research and development work, I have built AI-powered systems that process real-world data, perform object detection using YOLOv8n, and deliver real-time feedback. These projects required rigorous testing, data validation, and performance evaluation skills that align with the expert evaluation responsibilities of this role.

A relevant example is the Wireless Vision-Aid for the Blind (WVAB) project, where I designed a complete system combining computer vision, low-latency streaming, and multilingual audio output. This involved working with Python, C++, edge hardware, and the COCO dataset, and required careful assessment of accuracy, latency, and reliability under real-world conditions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my research and evaluation experience can contribute to CuraSenseAI’s work.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
