I am writing to apply for the Environmental Scientists position at STEM Sync AI. While my professional background is in software engineering and AI systems, I am drawn to this role because it sits at the intersection of technology and environmental science, an area where I believe my technical skills can contribute meaningfully.

Through my research and development work, I have built AI-powered systems that process real-world data, including object detection pipelines and real-time monitoring dashboards. These projects required careful data handling, evaluation of model outputs, and integration of automated workflows, skills that directly apply to evaluating biology and environmental science content.

One area that particularly interests me is the use of AI to analyze environmental data at scale. My experience with Python, computer vision models like YOLOv8, and real-time data streaming has given me a practical understanding of how automated systems can assist in scientific evaluation tasks.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI and software engineering can support STEM Sync AI’s evaluation work.

Sincerely,

Md Shahanur Islam Shagor
