I am writing to apply for the Director of Total Rewards position at SKIMS. While my career has been in software engineering rather than HR leadership, I bring strong technical expertise in building scalable systems, automation, and data infrastructure that directly supports the technology ecosystem this role manages.

My technical background centers on designing reliable backend systems, real-time monitoring dashboards, and automated workflows. I have built server health monitoring platforms using Node.js, React, and Socket.IO that stream live metrics and provide role-based access control. I have also implemented CI/CD pipelines, Dockerized deployments, and monitoring stacks with Prometheus and Grafana to ensure system reliability and data accuracy.

One area that directly connects to this role is my experience with automation and process optimization. I have developed systems that reduce manual processes through scheduled jobs, real-time notifications, and automated reporting. These projects required the same attention to data governance, compliance, and operational efficiency that the Director of Total Rewards role demands.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical infrastructure and automation experience can support SKIMS' continued global growth.

Sincerely,

Md Shahanur Islam Shagor
