I am writing to apply for the Chief Financial Officer role at INFUSE. Your emphasis on data-driven decision-making, financial process design, and comfort with AI-driven environments aligns with the kind of work I have been doing as a software engineer building financial and operational systems.

In my recent work, I designed and developed an AI-powered financial application that processes user interactions, generates PDF term sheets, and integrates with AWS services for authentication and data handling. This project required structuring financial data flows, ensuring accuracy in automated outputs, and building systems that support clarity and fast decision-making.

I have also built full-stack platforms with subscription management, payment gateways, and role-based access control using Laravel, Next.js, and Stripe. These systems required careful financial logic, transparent transaction handling, and scalable architecture to support growth. Designing these systems has given me a practical understanding of how financial operations, data integrity, and automation work together in a tech-enabled environment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
