I am writing to apply for the Auxiliar de Dados REMOTO position at ADVBOX. With a background in full-stack development and a focus on data management, I am well prepared to support your data migration and processing needs.

Through my professional experience, I have worked extensively with relational databases including MySQL and PostgreSQL, designing schemas, writing optimized queries, and ensuring data consistency across applications. I have also used MongoDB for document-based data storage and retrieval. This hands-on experience with structured and unstructured data gives me a solid foundation for handling migration tasks accurately and efficiently.

In previous development roles, I built and maintained RESTful APIs that processed large volumes of data, implemented data validation and transformation logic, and automated routine database operations. I am comfortable working with tools like Git for version control and Linux for server-side data management. My approach to data work is methodical: I verify inputs, test outputs, and document processes to ensure reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my data management skills can contribute to ADVBOX’s migration efforts. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
