I am writing to apply for the Junior Market Specialist Analyst position at Shumba Capital Ltd. Your focus on digital assets, market research, and data-driven trading aligns with my interest in working with real market data and contributing to strategy improvement in a hands-on, remote environment.

What stands out to me about this role is the opportunity to support daily market operations, monitor trading activity, and help improve strategies using data and analysis. My background in software engineering has given me a strong analytical foundation and the ability to work with data, track performance, and identify patterns. I am comfortable working under pressure and making quick, informed decisions.

In my professional experience as a Web Developer, I have built and maintained data-intensive applications, including an AI-powered financial platform that involved processing financial data, integrating APIs, and ensuring system reliability. This work required attention to detail, clear communication with team members, and the ability to troubleshoot issues efficiently. I am confident these skills translate well to monitoring crypto markets, supporting trading operations, and tracking technical or financial issues.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my analytical mindset, adaptability, and willingness to learn to Shumba. I have attached my CV for your review and look forward to the possibility of contributing to your team.

Sincerely,

Md Shahanur Islam Shagor
