I am writing to apply for the Senior Data & AI Engineer position at enua Pharma GmbH. Your work in the medical cannabis market and your focus on building a data and AI infrastructure from the ground up is exactly the kind of challenge I am looking for. The opportunity to shape the technical foundation of a growing company appeals to me.

Through hands-on project development, I have built AI-powered systems that combine LLM APIs, automation, and data pipelines. I have worked with OpenAI and Replicate APIs to create intelligent assistants and image processing workflows. I have also developed RESTful APIs using Node.js and Express, integrated third-party services, and managed databases including PostgreSQL and MongoDB. My experience includes building authentication systems, payment integrations, and real-time features.

One area that particularly interests me is building agents and automations that handle real operational work. In a recent project, I developed an AI-powered financial platform that used OpenAI assistants to process user queries, AWS Transcribe for voice-to-text conversion, and automated PDF generation and email delivery. The system handled data ingestion from external sources and ran scheduled tasks. This matches directly with your need for someone who can build LLM workflows, integrate systems, and automate repetitive tasks.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how my background in AI engineering and system integration can contribute to enua’s data and AI initiatives.

Sincerely,

Md Shahanur Islam Shagor
