I am writing to apply for the Senior Cloud Native Architekt position at Wavestone Germany AG. The opportunity to design and prototype a Kubernetes platform for high-availability, 24/7-critical applications aligns closely with my technical background in cloud-native infrastructure and distributed systems.

What stands out to me about this role is the focus on architecting a platform for operational data exchange between transmission network operators, with requirements for high throughput, event-driven architectures, and robust security. My experience includes working with Kubernetes, Docker, and monitoring stacks like Prometheus and Grafana, which are directly relevant to designing observable and resilient systems.

Through my professional experience, I have built and deployed containerized applications on Linux servers, configured Nginx and Apache, and set up CI/CD pipelines for production environments. I also developed a real-time server health monitoring dashboard using Node.js, Socket.IO, and Docker, which involved streaming live system metrics, implementing role-based access control, and ensuring reliable data delivery. This project required designing for scalability and real-time performance, similar to the event-driven data distribution patterns described in your project.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in cloud-native architecture and system design can contribute to the success of this PoC project at Wavestone.

Sincerely,

Md Shahanur Islam Shagor
