I am writing to apply for the Full-Stack Software Engineer | AI Accelerated role at Merlin Digital Solutions GmbH. Building AI-native products that address real friction in the public sector is exactly the kind of challenge I want to work on. Your focus on high ownership, small teams, and practical AI deployment aligns with how I prefer to build.

Through professional full-stack development work, I have built production systems using TypeScript, Next.js, and Postgres, and deployed them with Docker on cloud infrastructure. I have also worked extensively with LLM APIs and AI assistants, integrating them into real applications that handle authentication, data processing, and user-facing features. This combination of full-stack engineering and AI integration maps directly to the work you are doing with conversational AI, RAG systems, and multi-tenant SaaS.

One area that particularly interests me is building scalable backend architectures for multi-tenant systems. In previous projects, I have designed and developed APIs, implemented role-based access control, optimized database queries, and deployed services using Docker and Nginx on Linux servers. I am comfortable making technical decisions around data models, infrastructure, and tooling, and I take ownership of features from idea to production.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Merlin’s mission.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
