I am writing to apply for the Analytics Manager, Marketing Analytics role at Wolt. The opportunity to shape marketing measurement and drive growth decisions at a company operating across 500+ cities is genuinely compelling.

Through my work building data-intensive applications, I have developed strong skills in Python for statistical analysis and data processing, along with hands-on experience using SQL databases including MySQL and PostgreSQL. I have applied these skills to build real-time monitoring dashboards and analytics pipelines that track system health, availability, and performance metrics.

One area that particularly interests me is the challenge of turning analytical work into clear business decisions. In previous projects, I have designed systems that stream live metrics to dashboards, enabling teams to act on data without delay. I understand the importance of defining the right KPIs and ensuring that analysis leads to action rather than just reports.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in data-driven development and analytics can contribute to Wolt’s marketing analytics team.

Sincerely,

Md Shahanur Islam Shagor
