I am writing to apply for the Software Developer C# (m/w/d) position at NeoBird Digital. The opportunity to contribute to a simulation project for complex intralogistics systems, combined with the prospect of working on diverse projects in games, interactive applications, 3D, AR/VR, and web applications, aligns well with my background in software engineering.

My core strength is object-oriented software development with C# and C++. I have applied OOP principles to build systems that are structured, maintainable, and performant. In my professional experience, I have focused on writing clean, reliable code and designing architectures that can handle complex scenarios without sacrificing quality or extensibility.

One area that particularly interests me is the emphasis on performance-oriented implementation of features and algorithms. In previous work, I have optimized application performance through query tuning, caching strategies, and careful system design. I am comfortable working with product owners and technical stakeholders to make sound architectural decisions and contribute to the full development lifecycle.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to NeoBird’s current and future projects.

Sincerely,

Md Shahanur Islam Shagor
