I am writing to apply for the Senior Softwareentwickler .NET und Blazor position at Wavestone Germany AG. The project involves building a monitoring system to calculate KPIs and provide intuitive visualizations in the energy sector, which aligns with my experience in developing full-stack web applications and real-time monitoring dashboards.

Through my professional experience as a Web Developer, I have built and maintained scalable web applications using modern frameworks and technologies. I have worked extensively with JavaScript, CSS, Bootstrap, and Git, and I have practical experience with C# and .NET. I am comfortable with test-driven development (TDD) and have used SQL databases with ORM tools to manage structured data efficiently.

One area that particularly interests me is the development of monitoring and visualization systems. I have built a real-time server health monitoring dashboard that tracks availability, latency, and system metrics using Socket.IO for live streaming data to the browser. This project involved coordinating data flow between backend services and frontend components, similar to the KPI calculation and visualization requirements of your project.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in web development and monitoring systems can contribute to the success of your project at Wavestone.

Sincerely,

Md Shahanur Islam Shagor
