I am writing to apply for the IT Transformation Consultant (Delivery Focus) role at Pragtics GmbH. What stands out to me about Pragtics is the emphasis on pragmatic, hands-on delivery rather than theoretical consulting. The idea of working in the "Maschinenraum" instead of the "Prˆsentationsraum" aligns with how I approach technology: build things that work, solve real problems, and keep moving.

Through my professional experience as a full-stack developer, I have developed the ability to understand complex IT systems from both a technical and business perspective. I read code comfortably, understand database structures and API architectures, and can assess technical feasibility quickly. My background includes leading IT projects end-to-end, from initial concept and requirement analysis through to deployment and go-live.

In my most recent role at Explo-IT, I was responsible for delivering scalable web applications using Laravel and Next.js. This involved building RESTful APIs, implementing authentication and role-based access control, integrating payment gateways, and deploying on Linux servers with Docker and Nginx. I worked closely with stakeholders to translate business requirements into clear, actionable technical specifications and user stories. I also delivered real-time features using WebSockets and optimized database performance through query tuning and caching strategies.

One project that challenged me recently was the Multivendor E-commerce Management Ecosystem, where I designed and built a full-stack marketplace platform connecting customers, sellers, delivery agents, and logistics teams. My role involved architecting the Laravel backend, designing the MySQL database schema, implementing role-based access control, and coordinating multiple Flutter mobile applications. The project required balancing technical complexity with practical delivery constraints, making pragmatic decisions about what was "good enough" to move forward without overengineering.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Pragtics and your clients' transformation projects.

Sincerely,

Md Shahanur Islam Shagor
