I am writing to apply for the Embedded Softwareentwickler Automotive Radar position at smartmicro. Your work on high-performance radar sensors for autonomous driving and smart city infrastructure is impressive, and I am interested in contributing to a team that builds real-world sensing technology for safer roads.

My software engineering background includes C++, Python, and Linux, which are directly relevant to embedded software development. I have worked with PyTest for unit and integration testing, and I am comfortable with Git-based version control and collaborative development workflows. I approach software development with a focus on reliability, modular design, and thorough testing.

Through hands-on project development, I have built systems that require real-time data processing, sensor integration, and cross-module communication. One area that particularly interests me is the integration of software components from different teams and the creation of clean interfaces between them. I am used to working through the full development cycle: analyzing requirements, implementing features, writing tests, and debugging issues.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I would welcome the opportunity to discuss how my skills in C++, Python, and Linux-based development could support smartmicro’s radar sensor projects. My CV is attached for your review.

Sincerely,

Md Shahanur Islam Shagor
