I am writing to apply for the Data Analyst Retention role at Ollie. Your mission to improve the lives of pets and pet parents through human-grade nutrition and health services is something I genuinely respect. I have followed Ollie's growth and appreciate how data drives your member experience and subscription retention strategy.

My technical foundation is built on working with databases, analytics, and data-driven applications. I have hands-on experience with MySQL, PostgreSQL, and MongoDB, writing complex queries, designing schemas, and optimizing data retrieval for performance. I am comfortable working with production databases and extracting meaningful insights from raw data.

In previous projects, I built full-stack applications that relied on real-time data processing and user behavior tracking. For example, in the Smart Finance platform, I designed a modular architecture with Prisma ORM and SSE-based live updates, handling transaction data, budgeting metrics, and reporting. This required careful data modeling, query optimization, and clear presentation of financial insights to users.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I would welcome the opportunity to contribute to Ollie's retention analytics work and help drive data-informed decisions that improve the member experience. I have attached my CV for your review and look forward to hearing from you.

Sincerely,

Md Shahanur Islam Shagor
