I am writing to apply for the test position at The Future Laboratory. The role caught my attention, and I believe my background in full-stack development and AI engineering aligns well with the work your team does.

Through professional experience as a Web Developer, I have built and maintained scalable web applications using Laravel, Next.js, React, and Node.js. My work includes designing RESTful APIs, implementing authentication and role-based access control, optimizing database queries, and integrating third-party services like payment gateways and cloud storage. I have also delivered real-time features using WebSockets and deployed applications on Linux servers with Docker and CI/CD pipelines.

One area that particularly interests me is building systems that are both technically robust and user-friendly. In my project work, I developed a full-stack multi-vendor e-commerce platform with a Laravel backend and multiple Flutter-based mobile apps, handling complex role-based access, real-time notifications, and secure data flow across the ecosystem. This experience taught me how to manage complexity while keeping the user experience smooth.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills and experience can contribute to The Future Laboratory.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
