I am writing to apply for the Human Resources Specialist position at Haystack. While my career has been built in software engineering, the core competencies required for this roleâ clear communication, structured documentation, cross-functional collaboration, and stakeholder managementâ are skills I have developed and applied daily throughout my professional experience.

In my work as a Web Developer at Explo-IT and DataSoft LTD, I regularly served as a primary point of contact between technical teams, clients, and management. I was responsible for gathering requirements, resolving disputes around project scope and deliverables, and maintaining detailed records of decisions and changes. These responsibilities required the same level of professionalism, confidentiality, and attention to detail that HR roles demand.

One area where I have developed particular strength is in conducting structured investigations and maintaining accurate documentation. During my time at Explo-IT, I led the resolution of several technical conflicts by systematically gathering information, interviewing stakeholders, documenting findings, and presenting clear recommendations to management. This process closely mirrors the investigation and record-keeping responsibilities outlined in the job description.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in structured problem-solving, documentation, and cross-functional communication can contribute to the HR team at Haystack.

Sincerely,

Md Shahanur Islam Shagor
