I am writing to apply for the Instructional Designer position at Bluefield University. Your focus on building high-quality online learning experiences within a Christ-centered mission is something I find meaningful, and I would welcome the opportunity to contribute to your course development efforts.

Through my work as a full-stack developer, I have built and maintained web applications that require careful attention to structure, usability, and accessibility. I have experience working with content management systems, integrating multimedia elements, and ensuring that digital interfaces are consistent and easy to navigate. These skills translate directly to building effective online course modules within an LMS environment.

One area that particularly interests me is the quality assurance process described in this role. In my development work, I have regularly performed testing to identify broken links, formatting errors, and navigation issues before launch. I am comfortable working with templates and maintaining branding consistency across multiple projects, which I understand is important for course shells in Canvas.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how my background can support Bluefield University’s instructional design goals.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
