I am writing to apply for the AI Systems Engineer (Offensive Cyber) position at Snatch UP Jobs. My work sits at the intersection of AI engineering, cybersecurity, and autonomous systems, which aligns directly with the technical focus of this role.

Through research and development work, I have built systems that combine AI with security-focused architectures. One project involved designing OmniGuard V2X, a privacy-preserving blockchain framework for autonomous vehicle networks. This system used SHA3-256 cryptographic chaining, Zero-Knowledge Proofs, and post-quantum cryptography to secure Vehicle-to-Everything (V2X) communication against cyber threats including spoofing, tampering, and unauthorized access. The work required integrating cryptographic primitives with real-time data flows on embedded hardware such as NVIDIA Jetson Nano and ESP32.

Another relevant project was WVAB (Wireless Vision-Aid for the Blind), a real-time assistive system that uses YOLOv8n-based object detection running entirely on edge devices. I implemented a custom UDP streaming protocol for ultra-low latency video transmission and built the full pipeline from camera input to multilingual audio feedback. The system operates offline with hardware costs under $15, demonstrating practical AI deployment in resource-constrained environments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in AI systems and cybersecurity can contribute to the work at Snatch UP Jobs.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
