I am writing to apply for the Werkstudent:in Marketing & GTM Operations position at SPREAD GmbH. Your work building Engineering Intelligence software for leading industrial OEMs like BMW, Mercedes-Benz, and Volkswagen is impressive, and I am drawn to the real ownership this role offers within an AI-native GTM team.

As a Software Engineering student and a developer who actively uses AI tools in daily work, I fit the "AI-native" requirement naturally. I regularly work with LLMs such as Claude and OpenAI to automate tasks, generate drafts, and structure research. I have built automated workflows that take raw inputs and produce structured outputs, which directly translates to producing first-draft collateral from call notes and win stories using your AI toolchain.

What stands out to me about this role is the combination of operational execution and AI-assisted research. I am comfortable managing logistics end-to-end, maintaining organized libraries, and running structured prompts for account research. My engineering background means I pick up new tools like Salesforce, CMS platforms, and Markdown without hand-holding, and I understand the importance of closing loops on time.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in English and Bengali, have working knowledge of German and Russian, and enjoy collaborating in international and cross-cultural environments.

I am currently enrolled in a Bachelor’s program in Software Engineering and can commit 16-20 hours per week from September 2026. I have attached my CV for your review and welcome the opportunity to discuss how I can contribute to SPREAD’s GTM operations.

Sincerely,

Md Shahanur Islam Shagor
