I am writing to apply for the Technischer Baumanager position in Berlin, as advertised by QTalents. While my professional background is in software engineering, I bring a strong foundation in technical problem-solving, structured project execution, and independent management of complex systems.

Through my professional experience as a Web Developer, I have developed a disciplined approach to planning, executing, and monitoring technical projects. I am accustomed to working autonomously, managing priorities, and ensuring that deliverables meet quality and timeline requirements. This has given me the ability to handle multiple workstreams simultaneously while maintaining a clear focus on operational goals.

One area that particularly interests me is the hands-on, object-oriented nature of this role. In my previous positions, I was responsible for the full lifecycle of applications, from initial analysis and design through to deployment and ongoing maintenance. This required me to conduct thorough assessments, plan and prioritize tasks with budget considerations, and coordinate closely with external partners and service providers. I am comfortable taking ownership of technical processes and ensuring that every stage is executed with precision.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my technical and organizational skills can contribute to the successful management of your residential property portfolio in Berlin.

Sincerely,

Md Shahanur Islam Shagor
