I am writing to apply for the (Junior) Technischer Objektleiter position at QTalents - Real Estate Recruiting. While my professional background is in software engineering rather than property management, the technical discipline, system reliability focus, and operational coordination skills I have developed are directly transferable to this role.

Through my work as a Web Developer, I have gained hands-on experience managing server infrastructure, monitoring system health, and coordinating with external service providers. I have worked extensively with Linux servers, Docker containers, Nginx, and Apache configurations, ensuring that applications remain stable and performant under real-world conditions. This technical foundation gives me a practical understanding of how to oversee technical operations and maintain consistent service delivery.

One area that particularly interests me is the responsibility for planning and monitoring maintenance measures. In my development work, I have been responsible for scheduling updates, tracking system performance, and proactively addressing issues before they escalate. I am comfortable working with budgets, timelines, and external vendors to ensure that technical work is completed on schedule and within scope.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am motivated by the opportunity to grow into a team leadership role and would welcome the chance to contribute to your client’s operations in Hamburg. I have attached my CV for your review and would be glad to discuss how my background can support your team.

Sincerely,

Md Shahanur Islam Shagor
