I am writing to apply for the Senior Data Engineer position at Onapsis. Your work in securing business-critical applications for organizations like the Forbes Global 100 is impressive, and I am interested in contributing to your mission of protecting SAP and Oracle landscapes through scalable data solutions.

Through my professional experience, I have built and maintained data pipelines and backend systems using Python, Node.js, and cloud infrastructure. I have worked with AWS services for deployment and storage, and I have used Docker for containerization and CI/CD pipelines for automated delivery. While my background is not exclusively in data engineering, I have consistently worked with data-intensive applications that required reliable ingestion, transformation, and storage.

One area that particularly interests me is AI/ML integration for identifying patterns and anomalies. I have hands-on experience integrating AI models into production systems, including using OpenAI and Replicate APIs for intelligent features. I have also worked with real-time data streaming using Socket.IO and have built monitoring dashboards that track system health and performance metrics.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to Onapsis. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
