I am writing to apply for the Senior Product Manager role at Skalar. Your mission to rebuild the tax and accounting industry from the ground up with an AI-native, transparent experience is exactly the kind of challenge I want to work on.

My background combines full-stack engineering with practical AI implementation. I have shipped multiple AI features into production, including AI assistants powered by OpenAI's latest models, document processing pipelines, and RAG-based systems for financial and real estate applications. In these projects, I owned the full cycle: building eval frameworks, iterating on prompts, and making build-vs-buy decisions on models and tooling. I understand the trade-offs between cost, quality, and latency in production AI systems.

One area that particularly interests me is shipping AI features that move real metrics. In my work on an AI-powered financial app, I integrated voice-to-text transcription, automated PDF generation, and AI-driven financial assistance. I defined success metrics, ran prompt iterations, and optimized for both accuracy and cost. This experience maps directly to the document recognition, classification, and auto-drafting workflows you described.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident I can contribute to Skalar from day one, and I would welcome the opportunity to discuss how my background aligns with your goals. I have attached my CV for your review.

Sincerely,

Md Shahanur Islam Shagor
